\*\*\* Notes of Significance \*\*\*

**South Fork Zone consists of 3 fires on the Caribou-Targhee National Forest Black, Carrot, and Big Elk.**

**Henry's Creek Completed a Final 209 – 100% Contained**

## Evening Brief

Date/Time Stamp: **Thursday, September 01, 2016 - 9:35 PM**

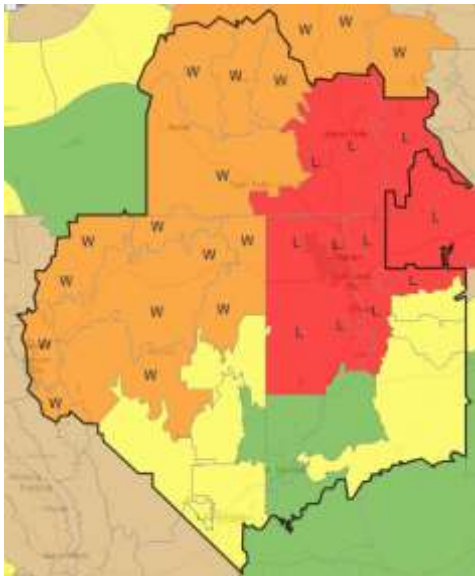

### Weather Summary

\*\*\* **HIGH RISK for WIND/LOW RH Idaho/Utah/Wyoming FRIDAY** \*\*\*

**Scattered thunderstorms with gusty winds** will occur this evening today across Eastern ID/WY and UT and into far eastern NV. These thunderstorms may have a little more moisture than storms yesterday, but will still be fast moving, and this will limit widespread heavier wetting rainfall amounts. Humidity could be somewhat higher as well with cloud cover, but still drier strikes will occur in-between in areas of record/near record dry fuels. **High Risk for Lightning** has been issued for these areas (see map). There will still be a threat of new starts and spread Today as SW winds also remain breezy along with the thunderstorms and any outflow winds.

There will also be a significant cooling trend behind the front Friday into the weekend across the northern half of the Great Basin where temperatures will drop to 5-12 degrees below normal, especially across ID.

A general trough pattern will remain in place across the Great Basin through next week with breezy winds and cooler temperatures. Low pressure systems will move east across the northern Great Basin at times bringing chances for precipitation later this weekend and again by the middle of next week. Further south drier weather will return Sunday through the middle of next week with still some gusty SW winds.

### Preparedness Levels

**Current:**

Great Basin	4
National	4

**Great Basin Fire Activity: Moderate Initial Attack**

**New Fires and Acres: 23 fires for 7672 acres**  
**Large Fire Growth – 8,185 acres**

### Resources:

- 90 Aircraft assigned within the Great Basin
  - Helicopters within the Great Basin
    - 14 Type 1 Helicopters
    - 12 Type 2 Helicopters
    - 29 Type 3 Helicopters
- 70 Crews are assigned within the Great Basin
  - 16 IHCs
  - 40 T2IA
  - 14 T2

## Great Basin Fire Potential Summary

ERC's remain near or above the 97th percentile across a large portion of northern Nevada, Idaho, western Wyoming and far northern Utah, which are near/above records. With ongoing fires in Idaho and western Wyoming into northern Utah, there is the potential for significant growth still in the coming days as breezy and drier weather returns. **High Risk** for wind/Low RH issued for ID/NV/UT/WY through Friday in areas that have ongoing large fires, recent lightning or increase risk for human starts.

Moist fuel conditions are expected to continue across southern portions of Utah, Nevada and the Arizona Strip this week, with some drying Sunday into the middle of next week.

\*\*\* Please refer to our fuels page for more detailed information \*\*\*
